FASCINATING FUNCTIONALITY

The powerful but pocket-sized mobile sound system

The sound pressure level is simply impressive. Multiple hundred people will hear and understand your words. At processions, guided tours, excursions, city tours – this little power box is always at your side and adapts to changing circumstances with the twist of your hand – literally!

Sound projection in opposite directions

The inimitable twist:
You got it

Concentrated, unidirectional sound projection

Use the shoulder strap

You can use the shoulder strap to carry your ITEC TWIN-BOX during guided tours and processions. This frees your hands and you can concentrate on your actual task - to guide your audience.

Go wireless: Use the wireless microphone for minimal distraction from what you want to talk about. Troublesome cables are a thing of the past.

Carry the Twin-Box along

If you want to serve a larger audience, you may consider carrying the TWIN-BOX along above the crowd. For this purpose, the TWIN-BOX comes with a tripod that you can mount on the shoulder strap with the provided quiver. As the TWIN-BOX is now above the crowd, the sound waves can spread freely. **Your voice is carried many hundred meters.**

Set up the Twin-Box

If there is no need to move along, the most comfortable way to operate the TWIN-BOX is to set it up in a fixed position. In halls, on the lawn, at parish festivals or at funerals: mount the TWIN-BOX on the tripod, connect additional microphones if desired, connect any auxiliary playback devices - and you have got the finest sound for your event.

POWERFUL ACCESSORIES

ITEC wireless microphones at your disposal

Hand-held microphone

Lavalier microphone

Headset microphone

Optional: built-in USB Player

The Twin Box is now available with built-in USB player. This practical accessory can play MP3 music files directly from USB flash drive. Therefore, it is possible, to have continuous selection of thousands of songs or many hours of continuous music program. An IR remote control simplifies operation of the device, track selection and volume control.

More accessories

Tripod

Ultra light box tripod adjustable in height.
